The maximum number of edges in a bipartite graph on 12 vertices is

- ☒ 36
- ☐ 48
- ☐ 12
- ☐ 24

Which relation given below is true?

- ☒ $\text{rad}(G) \leq \text{diam}(G) \leq 2 * \text{rad}(G)$
- ☐ $\text{rad}(G) \leq \text{diam}(G) \geq 2 * \text{rad}(G)$
- ☐ $\text{rad}(G) < \text{diam}(G) < 2 * \text{rad}(G)$
- ☐ all of the above

Let G be an arbitrary graph with n nodes and k components. If a vertex is removed from G , the number of components in the resultant graph must necessarily lie between

- ☐ k and n
- ☐ $k-1$ and $k+1$
- ☒ $k-1$ and $n-1$
- ☐ $k+1$ and $n-k$

Peterson graph is non-planar because

- ☐ It's sub graph contain sub division of K_5
- ☐ It's sub graph contain sub division of $K_{3,3}$
- ☐ It's contain K_5 minor
- ☒ Both b and c

Which of the following graphs has an Eulerian circuit?

- ☐ Any k regular graph where k is an even number
- ☐ A complete graph on 90 vertices
- ☒ Complement of cycle on 25 vertices
- ☐ None of above

Consider an undirected un-weighted graph G . Let a breadth-first traversal of G be done starting from a node r . Let $d(r, u)$ and $d(r, v)$ be the lengths of the shortest paths from r to u and v respectively in G . If u is visited before v during the breadth-first traversal, which of the following statements is correct?

- ☐ $d(r, u) < d(r, v)$
- ☐ $d(r, u) > d(r, v)$
- ☒ $d(r, u) \leq d(r, v)$
- ☐ None of the above

Name *

Your answer

A minimal spanning tree of a graph G is....

- ☐ A spanning sub graph
- ☐ A tree
- ☐ Minimum weights
- ☒ All of above

Let G be an arbitrary graph with n nodes and k components. If a vertex is removed from G , the number of components in the resultant graph must necessarily lie between

- ☐ k and n
- ☐ $k-1$ and $k+1$
- ☒ $k-1$ and $n-1$
- ☐ $k+1$ and $n-k$

Every non – trivial connected graph contains ≥ 2 vertices that are not cut vertices.

- ☒ True
- ☐ False

Consider an undirected random graph of eight vertices. The probability that there is an edge between a pair of vertices is $1/2$. What is the expected number of unordered cycles of length three?

- ☐ $1/8$
- ☐ 1
- ☒ 7
- ☐ 8

Which one of the following is TRUE for any simple connected undirected graph with more than 2 vertices?

- ☐ No two vertices have the same degree
- ☒ At least two vertices have the same degree
- ☐ At least three vertices have same degree
- ☐ None of these

Let G be the non-planar graph with the minimum possible number of edges. Then G has

- ☐ 9 edges and 5 vertices
- ☒ 9 edges and 6 vertices
- ☐ 10 edges and 5 vertices
- ☐ 10 edges and 6 vertices

How many undirected graphs (not necessarily connected) can be constructed out of a given set $V = \{v_1, v_2, \dots, v_n\}$ of n vertices?

- ☐ $n(n-1)/2$
- ☐ $2^{**}n$
- ☐ $n!$
- ☒ $2^{**n(n-1)/2}$

Let G be a simple undirected planar graph on 10 vertices with 15 edges. If G is a connected graph, then the number of bounded faces in any embedding of G on the plane is equal to

- ☐ 4
- ☐ 5
- ☒ 6
- ☐ 7

If a graph have Hamiltonian path then it is possible that the graph also has Hamiltonian circuit.

- ☒ True
- ☐ False

Which of the following statements are TRUE? a) The problem of determining whether there exists a cycle in an undirected graph is in P. b) The problem of determining whether there exists a cycle in an undirected graph is in NP. c) If a problem A is NP-Complete, there exists a non-deterministic polynomial time algorithm to solve A.

- ☒ a, b, c
- ☐ a, c
- ☐ b, c
- ☐ a, b

The maximum number of edges in a bipartite graph on 12 vertices is

- ☒ 36
- ☐ 48
- ☐ 12
- ☐ 24

If G is a disconnected graph then

- ☐ $C(G^c)$ is disconnected
- ☐ $C(G^c)$ is connected and $\text{diam}(G^c) \leq 1$
- ☒ $C(G^c)$ is connected and $\text{diam}(G^c) \leq 2$
- ☐ None of these

I is an independent set in G , if and only if $\circ V(G)$ is vertex cover $V(G) - I$ is vertex cover of G $\circ$ Both a and b $\circ$ None of these

- ☐ $V(G)$ is vertex cover
- ☒ $V(G) - I$ is vertex cover of G
- ☐ Both a and b
- ☐ None of these

Admission No. *

Your answer

Let S be an NP-complete problem and Q and R be two other problems not known to be in NP. Q is polynomial time reducible to S and S is polynomial-time reducible to R . Which one of the following statements is true?

- ☐ R is NP-complete
- ☒ R is NP-hard
- ☐ Q is NP-complete
- ☐ Q is NP-hard

Which of the following graph is planar?

☐ G1

☐ G2

☐ G3

☐ G4

G1 is not planar
G2, G3, G4 are all
planar

Which one of the following is TRUE for any simple connected undirected graph with more than 2 vertices?

☐ No two vertices have the same degree

☒ At least two vertices have the same degree

☐ At least three vertices have same degree

☐ None of these

Let $G_1 = (V, E_1)$ and $G_2 = (V, E_2)$ be connected graphs on the same vertex set V with more than two vertices. If $G_1 \cap G_2 = (V, E_1 \cap E_2)$ is not a connected graph, then the graph $G_1 \cup G_2 = (V, E_1 \cup E_2)$

☐ Can't have a cut vertex

☒ Must have a cycle

☐ Must have a cut edge(bridge)

☐ Has a chromatic no strictly greater than those of G_1 and G_2

Which of the following graphs has an Eulerian circuit?

- ☐ Any k regular graph where k is an even number
- ☐ A complete graph on 90 vertices
- ☒ Complement of cycle on 25 vertices
- ☐ None of above

The most efficient algorithm for finding the number of connected components in an undirected graph on n vertices and m edges is come under which class

- ☐ NP problem
- ☒ P problem
- ☐ NPC problem
- ☐ None of these

What is the largest integer m such that every simple connected graph with n vertices and n edges contains at least m different spanning trees?

- ☐ 1
- ☐ 2
- ☒ 3
- ☐ n

☐ Send me a copy of my responses.
